Aufgabe 1 - „Behälter“ Vector als ADT

Lösungsidee:
wie bei dem beispiel wo die größe des Felds erst zur Laufzeit fixiert wird ein array auf die gleiche Weise erstellen allerdings immer wenn die größe überschritten werden sollte, wird die funktion GrowVector aufgerufen, die die capacity verdopellt und somit auch den allokierten speicher und die werte des allten vectors in den neuen kopiert.

eine mögliche verbesserung meines codes wäre den vector wieder zu verkleinern wenn der count kleiner als die hälfte von capacity ist, oder den vector nicht jedesmal ums doppelte zu vergrößern sondern eine bessere gewählten wert zu verwenden. Aber das ist immer usecase spezifisch, je nachdem was man mit dem vector anfangen will.

Zeitaufwand: ~1h 30min

Code:

```
unit Vector;

interface

const
  MAX_CAPACITY = MaxInt;

type
  PIntArray = ^IntArray;
  IntArray = array[0..MAX_CAPACITY] of Integer; // max array size is MaxInt
(32767)
  Vec = record
    data: PIntArray;
    count: Integer;
    capacity: Integer;
  end;

procedure InitVector(var v: Vec);
procedure DisposeVector(var v: Vec);
procedure Add(var v: Vec; val: Integer);
procedure SetElementAt(var v: Vec; pos: Integer; val: Integer);
function ElementAt(v: Vec; pos: Integer): Integer;
procedure RemoveElementAt(var v: Vec; pos: Integer);
function Size(v: Vec): Integer;
function Capacity(v: Vec): Integer;

implementation
```

```
uses
  SysUtils;

procedure InitVector(var v: Vec);
begin
  v.count := 0;
  v.capacity := 1;
  GetMem(v.data, v.capacity * SizeOf(Integer));
  if v.data = nil then
  begin
    WriteLn('Error: Heap overflow.');
    Halt(1);
  end;
end;

procedure DisposeVector(var v: Vec);
begin
  FreeMem(v.data, v.capacity * SizeOf(Integer));
end;

procedure GrowVector(var v: vec);
var
  newCapacity: Integer;
  newData: PIntArray;
  i: Integer;
begin
  newCapacity := v.capacity * 2;
  if newCapacity > MAX_CAPACITY then
  begin
    WriteLn('Error: Capacity exceeds maximum value.');
    Halt(1);
  end;
  GetMem(newData, newCapacity * SizeOf(Integer));
  for i := 0 to v.count - 1 do
    newData^[i] := v.data^[i];
  FreeMem(v.data, v.capacity * SizeOf(Integer));
  v.data := newData;
  v.capacity := newCapacity;
end;

procedure Add(var v: Vec; val: Integer);
begin
  if v.count = v.capacity then
    GrowVector(v);
  v.data^[v.count] := val;
  Inc(v.count);
end;
```

```pascal
procedure SetElementAt(var v: Vec; pos: Integer; val: Integer);
begin
  if (pos < 0) or (pos >= v.count) then
  begin
    WriteLn('Error: Index out of range.');
    Halt(1);
  end;
  v.data^[pos] := val;
end;

function ElementAt(v: Vec; pos: Integer): Integer;
begin
  if (pos < 0) or (pos >= v.count) then
  begin
    WriteLn('Error: Index out of range.');
    Halt(1);
  end;
  ElementAt := v.data^[pos];
end;

procedure RemoveElementAt(var v: Vec; pos: Integer);
var
  i: Integer;
begin
  if (pos < 0) or (pos >= v.count) then
  begin
    WriteLn('Error: Index out of range.');
    Halt(1);
  end;
  for i := pos to v.count - 2 do
    v.data^[i] := v.data^[i + 1];
  Dec(v.count);
end;

function Size(v: Vec): Integer;
begin
  Size := v.count;
end;

function Capacity(v: Vec): Integer;
begin
  Capacity := v.capacity;
end;

end.
```

Test Code:

```
program VectorTests;

uses Vector;

var
  v: Vec;
  i: Integer;
begin
  // Initialize an empty vector
  InitVector(v);

  // Test adding elements
  WriteLn('Test adding elements:');
  writeln('0 elements - size: ', Size(v), ', capacity: ', Capacity(v));
  Add(v, 1);
  writeln('1 element - size: ', Size(v), ', capacity: ', Capacity(v));
  Add(v, 2);
  writeln('2 elements - size: ', Size(v), ', capacity: ', Capacity(v));
  Add(v, 3);
  writeln('3 elements - size: ', Size(v), ', capacity: ', Capacity(v));
  Add(v, 4);
  writeln('4 elements - size: ', Size(v), ', capacity: ', Capacity(v));
  Add(v, 5);
  writeln('5 elements - size: ', Size(v), ', capacity: ', Capacity(v));
  WriteLn;
  WriteLn;

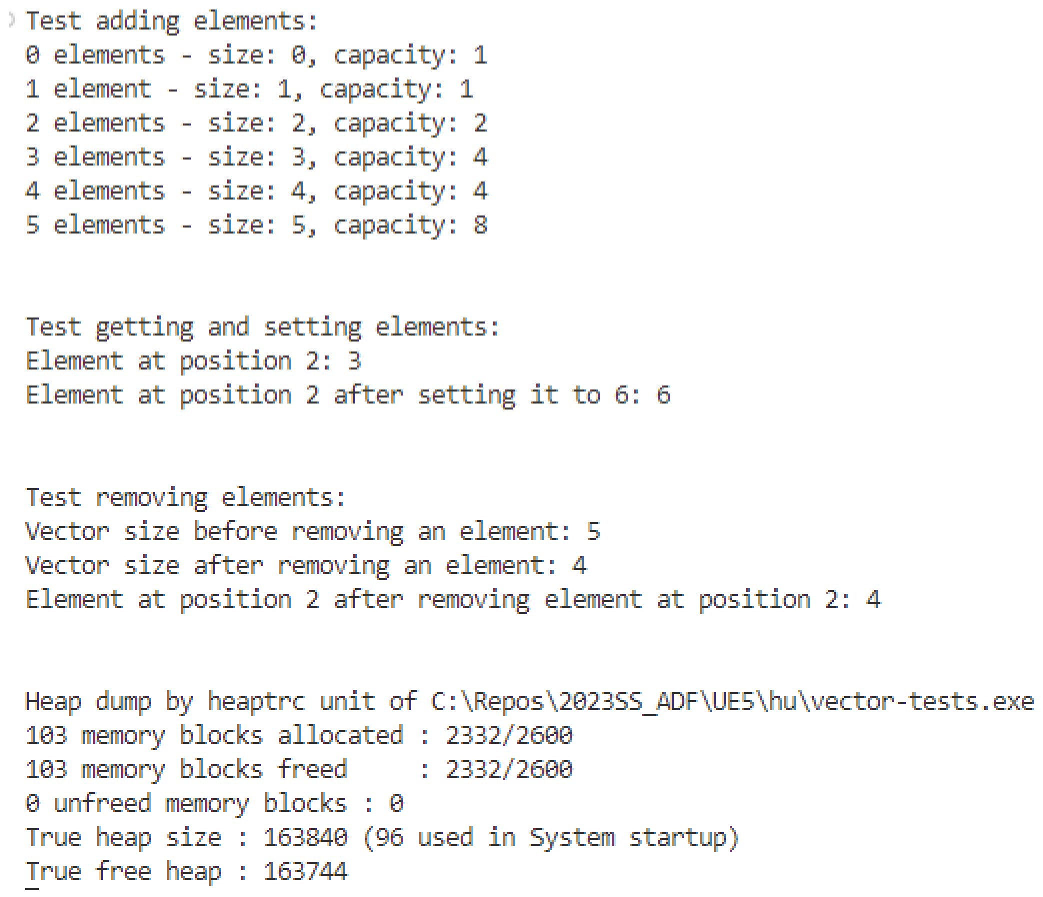
  // Test getting and setting elements
  WriteLn('Test getting and setting elements:');
  WriteLn('Element at position 2: ', ElementAt(v, 2)); // should print 3
  SetElementAt(v, 2, 6);
  WriteLn('Element at position 2 after setting it to 6: ', ElementAt(v, 2));
// should print 6
  WriteLn;
  WriteLn;

  // Test removing elements
  WriteLn('Test removing elements:');
  WriteLn('Vector size before removing an element: ', Size(v)); // should
print 5
  RemoveElementAt(v, 2);
  WriteLn('Vector size after removing an element: ', Size(v)); // should print
4
  WriteLn('Element at position 2 after removing element at position 2: ',
ElementAt(v, 2)); // should print 4
```

```
  WriteLn;
  WriteLn;

  // Test disposing of vector
  DisposeVector(v);
end.
```

Test Ausgabe:



```
Test adding elements:
0 elements - size: 0, capacity: 1
1 element - size: 1, capacity: 1
2 elements - size: 2, capacity: 2
3 elements - size: 3, capacity: 4
4 elements - size: 4, capacity: 4
5 elements - size: 5, capacity: 8

Test getting and setting elements:
Element at position 2: 3
Element at position 2 after setting it to 6: 6

Test removing elements:
Vector size before removing an element: 5
Vector size after removing an element: 4
Element at position 2 after removing element at position 2: 4
